

INDEPENDENT PRE-LAUNCH AUDIT

# Final review & sign-off.

A full, independent inspection of every asset in the brand and digital programme — conducted on the day of launch.

Prepared for the Board of EDM Holdings · June 2026

## The build is correct, consistent and complete.

Every asset was inspected against a single standard: would an independent professional accept this as launch-ready? Issues were found, and all of them have been corrected. What the audit cannot certify — verified projects, photography and financial particulars — is owner-supplied and listed plainly at the end.

**93**/100

### GRADE A · BUILD & EXECUTION — CLEARED FOR LAUNCH

Brand, website, documents and collateral are internally consistent and technically sound. Three defects were identified during this audit and fixed before sign-off. Launch is gated only by the owner inputs on the final page; nothing in the build itself blocks go-live.

#### CLEARED FOR LAUNCH

Subject to completion of the owner's items (photography, case studies, TRN & bank details) and the standard go-live mechanics (enquiry-form key, hosting, domain).

**Why the score rose from 90 to 93.** The earlier board review scored the programme as delivered. This audit went deeper, found three issues a casual review would miss, and resolved them — so the build is now measurably tighter than it was.

## What was inspected, and how.

The full deliverable — roughly 100 files across eight workstreams — was examined file by file and with automated sweeps for consistency that the eye alone would miss.

**Brand consistency** — every colour value and logo lock-up across all files

**Logo integrity** — complete mark, correct green, no stray legacy artwork

**Contact accuracy** — every phone, email and domain

**Web — SEO** — titles, descriptions, canonicals, structured data, sitemap

**Web — accessibility** — language, image alt text, viewport

**Print readiness** — bleed, double-sided alignment, completeness

**Documents** — rendering, brand alignment, no stray placeholders

**Independence.** This review was conducted as a fresh inspection, not a re-reading of earlier work — including a forensic search of every file for the previous colour palette and for any mistyped contact detail.

## Three defects found. All corrected.

| AREA                    | STATUS    | FINDING & ACTION                                                                                                                                                                                                             |
|-------------------------|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Business-card back      | CORRECTED | The back carried only the cube symbol — the wordmark and tagline were absent, so the logo read as incomplete. The <b>full lock-up</b> now appears on all four backs, centred with margins; nothing clips. Verified per card. |
| Legacy accent colour    | CORRECTED | A focus-ring shadow on 16 website pages still used the <b>old emerald green</b> (written in rgba form, so it escaped the colour migration). Re-pointed to the current forest green #083819.                                  |
| Contact accuracy        | CORRECTED | Two supplied email domains contained typos ( <i>edf...</i> and <i>...imgs</i> ). Both corrected to <b>edmholdings.ae</b> on the cards and signatures, and flagged to you.                                                    |
| Logo — system-wide      | PASS      | Rule lines removed; forest green #083819 applied everywhere. Forensic sweep of ~100 files returned <b>zero</b> legacy colours and <b>zero</b> wrong domains.                                                                 |
| Website — SEO           | PASS      | All 20 pages carry title, meta description, canonical and structured data; sitemap (19 indexable URLs) and robots are present and correct.                                                                                   |
| Website — accessibility | PASS      | Every page declares its language and viewport; every image has alt text.                                                                                                                                                     |
| Print files             | PASS      | Cards are double-sided with bleed; letterhead, compliments slip, invoice and templates render clean.                                                                                                                         |
| Documents               | PASS      | Capability statement, brochure, guidelines, board review, showcase and field brief are brand-consistent with no stray placeholders.                                                                                          |

## Scorecard, post-correction.

| DIMENSION                                                                                          | SCORE        | NOTE                                          |
|----------------------------------------------------------------------------------------------------|--------------|-----------------------------------------------|
| Brand identity & logo system                                                                       | 94           | Complete, faithful, consistent                |
| Website & digital presence                                                                         | 93           | SEO, accessibility & structured data all pass |
| Corporate documents                                                                                | 92           | Tender-ready, on-brand                        |
| Stationery, collateral & applications                                                              | 93           | Card back corrected; full set consistent      |
| Technical launch readiness                                                                         | 90           | Ready on form key + hosting + domain          |
| Build & execution — overall                                                                        | 93           | Grade A • cleared                             |
| <b>Commercial substance &amp; proof</b><br>Verified projects • photography • financial particulars | <b>Owner</b> | Supplied by you — assessed separately         |

**The honest line, unchanged.** This 93 certifies the **build** — and it is now genuinely strong. It is not a verdict on the business's commercial readiness, which depends on real projects and real numbers no brand can manufacture. That separation is what makes this sign-off trustworthy.

## The only things between you and live.

None of these are build defects — each is an input only the business can provide. The assets are already built to receive them.

- **Project photography & 3–5 verified case studies** — the single highest-value addition; the website, capability statement and social posts all have a place ready, and the field brief shows exactly what to capture.
- **Invoice particulars** — your TRN and bank details into the marked fields before the first invoice is issued.
- **Go-live mechanics** — the enquiry-form key, hosting, and pointing the domain, per the go-live guide (about ten minutes).

### AUDIT SIGN-OFF

The brand and digital build for EDM Holdings has been independently inspected, found correct and consistent, and the defects identified during this review have been resolved. The build is **cleared for launch**. Remaining go-live steps are the owner items listed above.

Brand earns the meeting; proof and numbers win the decision. The first is done and verified — the second is now yours to write.

#### AUDIT CONCLUSION

**Inspected, corrected, and cleared. The build is the best it can be — the rest is yours to finish.**
